*NRV - nutrient reference value.	
Vitamin D (D3)	10 µg (400 IU) 200%
Nutrition information	1 capsule NRV*

Ingredients: medium-chain triglycerides oil (MCT oil), cholecalciferol - vitamin D, capsule shell (gelatine, humectant - glycerol, water).

Warning: make sure that the capsule shell is not swallowed by the baby. The product should not be used in case of hypersensitivity to any of its ingredients. **If you feed your baby vitamin D-fortified infant formula, consult your physician before using this product.**

Food supplement in the form of twist-off capsules containing vitamin D (D3). Vitamin D is needed for normal growth and development of bone in children and contributes to the function of the immune system in children. Furthermore, vitamin D contributes to the maintenance of normal teeth, helps to maintain normal blood calcium levels and promotes normal absorption/ utilization of calcium and phosphorus. The quantities of vitamin D produced as a result of endogenous synthesis may vary depending on a number of factors, including season of the year, skin pigmentation, latitude, use of sunscreen, clothing, amount of skin exposed to sunlight and age. Vitamin D deficiency is common worldwide. According to the opinion of experts, 400 IU/day (10 µg) of vitamin D is recommended for all infants from birth to 12 months of age.^{1,2,3} The product is intended for newborns and infants (up to 12 months), especially for breastfed and partially breastfed infants, to supplement the diet with vitamin D.
